FREE GUIDE · WHAT JARVIS REALLY COSTS

Run Jarvis for *Pennies*

Every Jarvis feature, what it does, and what it really costs to run. Measured on the live system in October 2026, starting from the cheapest setup that still feels like Jarvis: talking, tools, sight, hands, and the phone.

on a local brain, running on your own Mac

ZUBAIR TRABZADA

AI WORKSHOP

OCTOBER 2026

START HERE

No subscription. A metered brain. Your keys.

One minute of understanding that removes the fear of a surprise bill.

The one-sentence answer

Jarvis runs on your own computer and has **no subscription**. When he thinks, he uses an AI brain you plug in with **your own API key**, metered like electricity: you prepay a few dollars, every reply sips a cent or two, and when the tank is empty he simply stops and tells you.

Every part of Jarvis falls into one of three groups:

1. **Free, every day**
   The 3D galaxy of your notes, long-term memory, the Google actions themselves (Gmail, Calendar, Sheets, Docs, Drive), Telegram delivery, FOCUS mode, the WATCH screen check, HOLO hand gestures, the browser voice, and a local brain on your own Mac. None of these touch a meter.

2. **Metered thinking (your Anthropic key)**
   Every reply, every look at your screen and every tool action spends a little of your prepaid credit. Most cost somewhere between a fraction of a cent and a few cents. The full list is on pages 03 and 04.

3. **Optional add-ons (their own meters, all skippable)**
   The phone line runs on Retell, at about 9 to 14 cents a minute plus $2 a month for the number. The cinematic cloned voice runs on ElevenLabs, which has a free tier and then starts at $6 a month. Skip both and Jarvis still does everything else.

Why a surprise bill can't happen: every key is prepaid. You buy Anthropic credit in advance, Retell runs on credit you load (new accounts start with $10 free), and ElevenLabs is a flat plan. When a tank runs dry, Jarvis tells you. Nothing can run up your card.

THE BRAIN

Pick your price per reply

Same Jarvis, same personality, different brain. Switch any time, out loud.

BRAIN	PER REPLY	$5 LASTS ABOUT	BEST FOR
Claude Opus 5.5 $4 in / $20 out per million tokens	~3¢	160 replies	The heaviest thinking
Claude Sonnet 5.5 SWEET SPOT $2 in / $10 out per million tokens	~1.5¢	325 replies	Everyday Jarvis
Claude Haiku 4.5 $1 in / $5 out per million tokens	<1¢	850 replies	Quick chit-chat
Local brain on your Mac free models through Ollama	FREE	unlimited	Small talk at $0

SAY IT TO JARVIS

```
"Jarvis, switch to Sonnet 5.5."
"Jarvis, try on Haiku."
"Jarvis, switch to your local brain."
"Jarvis, back to your usual brain."
```

Why the brain decides the bill: every reply carries about 6,200 tokens of Jarvis's personality, memory and rules, so the price per token is what you feel. Sonnet 5.5 costs half of Opus 5.5 and keeps the same Jarvis. The local brain needs Ollama and a recent Mac; it is slower and simpler, so keep it for small talk. Tool actions and screen takeovers always run on a Claude brain.

MY RECEIPT

In the last 30 days I sent Jarvis **166** questions at my desk. On Sonnet 5.5 that is about **$2.55** for the whole month. On Opus 5.5, about **$5.10**.

THE METER · EVERYDAY

Your everyday assistant

On the recommended setup: the Claude Sonnet 5.5 brain and the free browser voice.

WHAT JARVIS DOES	TYPICAL COST
Answers you, from your own notes "What did I decide about pricing?" The galaxy flies to the note while he speaks.	~1.5¢
Instant reflexes Simple commands decided in about a fifth of a second, before the big brain even wakes up.	<0.01¢
Google actions "What's on my calendar tomorrow?" Calendar, Gmail, Sheets, Docs and Drive. The Google side is free; you pay for his thinking.	~3¢
Live web research "Research the best CRM for a small agency." Includes a few web searches at 1¢ each.	~6¢
Invoices and quotes Brain work only. The PDF itself is made free on your own machine.	~5¢
Telegram texts and voice notes Talk to him from your pocket. Delivery is free; his answer costs the same as any reply.	~1.5¢
Long-term memory and the 3D galaxy He remembers what you tell him and grows the galaxy as you talk.	FREE
Swapping brains by voice Changing the brain only changes the meter, never the price of the swap.	FREE

So a busy day at the desk (20 questions, 5 calendar or email actions and one research question) costs about **50¢** on Sonnet 5.5.

THE METER · SIGHT AND HANDS

He can see, and he can drive

Vision costs less than a normal reply, because a look carries a picture instead of his whole memory.

WHAT JARVIS DOES	TYPICAL COST
EYES: a look through your webcam "What do you think of this shirt?" One frame to the brain.	**<1¢**
EYES: posture, phone and away-from-desk callouts Tracked on your own machine. No frames leave your computer.	**FREE**
Screen share questions "What's wrong with this spreadsheet?" One look at your screen per question.	**<1¢**
WATCH: keeps an eye on your screen A tiny local check every 5 seconds is free. He only speaks up when you have been stuck, at most once every few minutes.	**~1¢ a nudge**
FOCUS mode Calls you out the moment you drift to YouTube. Runs entirely on your Mac.	**FREE**
HOLO hand gestures Pinch and swipe the galaxy with your bare hands through the webcam.	**FREE**
Screen takeover, balanced speed "Take over and add this event to my calendar." He looks at the screen every step; a typical task is about 10 steps.	**~15¢ a task**
Screen takeover, fast speed Same job on Claude Haiku. Quicker and cheaper, a little less precise.	**~8¢ a task**

The habit that matters: end the screen share when you are done. An open share costs nothing while it sits there; you only pay when he actually looks.

THE PHONE LINE

When Jarvis picks up the phone

Calls run on Retell and are priced by the minute. This is the one feature that adds up, so here is exactly how.

WHAT A CALL MINUTE IS MADE OF	PER MINUTE
Retell's voice engine	5.5¢
The voice Budget voices 1.5¢, the ElevenLabs voice 4¢	1.5–4¢
The AI that talks on the call Budget models like GPT-5 mini under 1¢, Claude Haiku 4.5 2.5¢	<1–2.5¢
The phone line itself (US)	1.5¢
A full call minute	~9–14¢

WHAT REAL CALLS COST	TYPICAL COST
Jarvis books a table or an appointment He calls the business, handles the back and forth, and reports back. Usually 1 to 2 minutes.	10–30¢
Jarvis calls you about something urgent "Call me if anything important comes up." About a minute.	10–15¢
You call his private hotline from the road Code-protected. Ask about your calendar, a client, your notes. About a minute.	10–15¢
His phone number	$2 a month

MY RECEIPT

My last **198** Retell calls added up to **168** minutes and a total bill of **$29.30**. That is about **15¢** a call.

The biggest phone dial is the AI model behind the call. Budget models cost under a cent a minute, while premium high-priority models can cost 30¢ a minute on their own. Pick a budget model in Retell unless the call needs heavy reasoning. New Retell accounts get **$10 free**, roughly 70 to 110 minutes of calls.

YOUR DAY

Build your day from zero

Start free and stack only what you use. Daily numbers on the recommended setup.

0 — The free day
Talk to Jarvis on the local brain, FOCUS keeps you on task, HOLO for the fun of it, memory and the galaxy, the browser voice, Telegram delivery. Everything runs on your Mac.
$0 A DAY

1 — The everyday assistant
20 questions on Sonnet 5.5, 5 calendar or email actions and one research question.
~50¢ A DAY

+ — Screen co-pilot
An hour of work with your screen shared: about 20 looks, with WATCH running in the background.
+20¢ AN HOUR

+ — Hands
Three screen takeovers at balanced speed.
+45¢ A DAY

+ — The phone
Two errand calls of about two minutes each, with the ElevenLabs voice.
+50¢ A DAY

The honest anchor

Most days with Jarvis cost **well under a dollar**. The bill simply follows how much you use him: more questions, more calls, more cents. Use him less, pay less. There is no minimum and nothing ticking while you sleep.

The voice, if you want the cinema: the browser voice is free forever. ElevenLabs' free tier covers roughly 10 to 20 minutes of Jarvis talking a month, and the $6 Starter plan covers roughly 30 to 60 minutes with your own cloned voice.

KEEP IT CHEAP

Six dials and the straight answers

Same Jarvis, smaller meter. Each dial is one sentence to him or one setting.

THE SIX DIALS

1. **Switch to Sonnet 5.5**
   Half the price of Opus 5.5 per reply, same Jarvis.
2. **Small talk on Haiku or local**
   Under a cent a reply, or free.
3. **End the screen share**
   You pay per look, never for an open share.
4. **Text before you call**
   Telegram delivery is free. A phone minute is about 10¢.
5. **A budget model for calls**
   The difference between about 9¢ and 40¢ a minute.
6. **Keep the browser voice**
   Free forever. Upgrade when the cinema matters to you.

STRAIGHT ANSWERS

Is there a Jarvis subscription?
No. Jarvis runs on your computer. The brain is pay as you go on your own key, and you prepay it.

Can he run up my card?
No. Credits are prepaid, he stops when they run out, and he never makes a paid call without your word.

What's the cheapest way to start?
$5 of Anthropic credit, Sonnet 5.5, the browser voice, and no phone yet. That is about **325 replies**. Add the phone later with Retell's $10 of free credit.

Does spending more make him smarter?
No. Spending buys reach (the phone, the cinematic voice). The brain you pick sets how smart he is, and even the cheap ones run the full system.

Costs measured on the live Jarvis on October 1, 2026, using Anthropic's token counter and the published prices of Anthropic, Retell and ElevenLabs. Your numbers depend on how long your notes and conversations are. Prices move; the way Jarvis is paid for does not.
